## PROFILE SUMMARY

---

An Informatics student at Atma Jaya Yogyakarta University who is actively involved in organizational activities and has a strong interest in developing web. Proficient in programming concepts, application system testing, and technical documentation. Able to work collaboratively in a team and adapt quickly to dynamic work environments. Committed to making a significant contribution to research and development activities to support application development for both internal and external users.

## EDUCATION

---

**ATMA JAYA YOGYAKARTA UNIVERSITY**  
Faculty of Industrial Technology – Informatics  
GPA: 3.75 / 4.00

August 2022 - Present

## ACADEMIC PROJECTS

---

### Cinema Website – Full Stack Web Developer

September 2024 – November 2024

Developed a cinema website with Laravel and React, enabling online ticket booking, food ordering, and admin management features.

- Developed a modern cinema website using Laravel (backend) and React (frontend).
- Implemented seat booking, food ordering, and secure payment features.
- Built admin panel with full movie/showtime management and transaction reports.
- Integrated authentication and role-based access control.

### Mobile GYM Application – Full Stack App Developer

September 2024 – November 2024

Developed a gym app with Laravel and Flutter, featuring session booking, equipment rental, and secure REST API integration.

- Developed a cross-platform gym app using Laravel (backend) and Flutter (frontend).
- Implemented session booking with trainers and equipment rental.
- Built REST APIs for bookings, payments, and real-time session availability.
- Integrated user authentication and profile management.
- Completed as a capstone project showcasing full-stack mobile app development skills.

### ReUseMart Website – Full Stack Web & App Developer

February 2025 – June 2025

Developed ReUseMart with Laravel and React, an online second-hand marketplace with product listings, multi-role access (CS, warehouse, buyer, consignor, owner), and secure transaction management.

- Built ReUseMart, a second-hand goods platform using Laravel (backend) and React (frontend).
- Implemented product listings, secure authentication, and transaction management.
- Developed role-based access for CS, warehouse staff, buyers, consignors, and owners.
- Created admin tools for managing users, products, and transactions.
- Focused on responsive, user-friendly UI to support all roles effectively.
